

Aller-Calm

Supports Normal Respiratory Function
in the Presence of Airborne Allergens

Recommended by
Angie Svoboda, Pharm D.

DESCRIPTION

Aller-Calm is a blend of standardized herbal extracts clinically formulated and tested to promote healthy, normal breathing and to support clear airway passages seasonally and all year-round.

FUNCTIONS

Over 30 million Americans are affected by seasonal discomfort of the respiratory system. This is primarily caused by the hypersensitivity or the immune system toward environmental allergens, such as pollen, animal dander, dust and mold. The key to solving this hypersensitivity is to deactivate or reduce the body's overreaction to the foreign compounds before significant discomfort arises. Aller-Calm is a powerful and comprehensive blend of nutrients and botanicals that is capable of helping to normalize the body's response to environmental "debris." This response involves helping to support the normal, healthy release of bio-chemicals that lower inflammation and other symptoms associated with exposure to environmental allergens.

- Aller-Calm supports normal respiratory function in the presence of airborne allergens through its proprietary Seasonal Seven Comfort Blend
- Aller-Calm promotes clear airway passages and supports normal, healthy breathing
- The VitaBerry[®] Organic Fruit Blend found in Aller-Calm provides highly concentrated phytonutrients, featuring a high ORAC value
- Bromelain helps support a normal, healthy response to inflammation
- Quercetin has been shown to support the normal, healthy release of histamine
- Stinging nettles found in Aller-Calm helps to stabilize the release of histamine from mast cells and supports the normal, healthy production of prostaglandins

INDICATIONS

Aller-Calm Complex supports a healthy respiratory system along with clear airway passages and normal breathing seasonally and all year-round.
